

Contents

Structural Engineering and Mechanics	1
1. Experimental study of the response of fiber reinforced beams subjected to static monotonic and cyclic bending.....	3
2. Numerical simulation of fibre reinforced cementitious composites.....	13
3. Determination of the critical contact buckling load of geometrically imperfect beams.....	25
4. Experimental study of the response of high-strength steel welded tubular X-joints under low-cycle fatigue loading	37
5. Experimental study on the response of T-joint steel pipe connections under low-cycle fatigue loading	45
6. Probabilistic model of marine corrosion wastage prediction for reliability assessment of steel port berthing facilities in far eastern Russia	55
7. Fractal geometry and applications in mechanics and engineering	67
8. Ductility of steel I-beams at elevated temperatures	87
9. Experimental study on the behavior of R/C frames strengthened by R/C infill-walls.....	99
10. Modeling techniques for simulating the buckling behavior of thin ferrocement stiffened plates	109
11. Numerical simulation of natural fire scenarios in a storage facility	121
12. Design of reinforced concrete structures under seismic loading	133
13. Critical incident angle for the optimum design of structures.....	147
14. Design of structures using optimization algorithms	161
Fluid Mechanics and Water Resources Engineering	173
15. Mixing in confined spaces by a vertical ‘point’ source	175
16. Experimental studies of turbulent flow over permeable and impermeable bed.....	187
17. Conditional and unconditional approximation of hydraulic conductivity for Karla aquifer stochastic simulation	199
18. Water pipe networks performance evaluation	211
19. Mathematical modeling of biofilm structures and their mechanical properties	227
20. Fluid transport properties at the nanoscale by molecular dynamics simulations	241
21. Remote sensing potential in hydrological simulation	253
22. Fluid flows from nanoscale to macroscale: a molecular dynamics based approach.....	265
23. Multiscale simulation of fluid flow in periodically grooved channels	271
24. Equations of motion for a compressible Navier-Stokes-Fourier fluid in a semi-Riemannian space-time geometry.....	283
Geotechnical Engineering	291
25. Explicit extension of the p - y method to pile groups.....	293
26. Seismic behavior of concrete-faced rockfill dams	317
27. Passive stabilization: a novel technique for seismic liquefaction mitigation at the foundation soil of existing structures	331
28. The elastoplastic borehole problem and size effects in view of a deformation version of gradient plasticity	343
29. Behaviour of anisotropic rocks. Modified Hoek –Brown failure criterion.....	355

Transportation and Traffic Engineering.....	367
30. Assessment of the impact of different lightning conditions on drivers' behavior	369
31. How to assess the impact of road safety communication campaigns: research designs and behavioral modeling	381
32. Strategic noise mapping in Greece - towards urban soundscape rehabilitation	395
33. Railway track: the influence of long-wavelength defects on the acting loads and track deflection	409
34. Analysis and forecast of transport demand – a vital component for sustainable transportation planning.....	423
General Topics	437
35. Quality of life – education and the human brain energy a new approach from an environmental engineering perspective	439
Authors' index.....	447
